Claims status:

Claims 1-4, 7, 14-18, 20, 29, 36 and 37 canceled.

Claims 6, 16, 25, 27, 28, 34 and 41 amended.

Claims 6, 8-13, 19, 21-28, 30-35 and 38-42 allowed.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Chris Guinn on 10/14/2004.

The application has been amended as follows:

Amended claims:

Claim 6. A method for manipulating a graphical display of a printed circuit board model, the printed circuit board model adapted to be used in an automated x-ray inspection system for detecting defects in a manufactured printed circuit board having one or more components comprising one or more pins soldered to the printed circuit board, the method comprising the steps of:

providing a graphical user interface comprising a first portion for providing a graphical display of a printed circuit board model comprising a plurality of image objects associated with a printed circuit board;

Art Unit: 2672

receiving a user selection of a first image object in the first portion of the graphical user interface;

displaying a target area containing the first image object selected, the target area corresponding to a portion of the printed circuit board to be imaged by the <u>automated x-ray imaging inspection system</u>;

receiving a user selection of a second image object in the first portion of the graphical user interface; and

modifying the displayed target area such that the target area is automatically manipulated to contain the first and second image objects by centering the target area with respect to the first and second selected image objects.

Claim 19. A computer program embodied in a computer-readable medium for manipulating a graphical display of a printed circuit board model, the printed circuit board model adapted to be used in an automated x-ray inspection system for detecting defects in a manufactured printed circuit board having one or more components comprising one or more pins soldered to the printed circuit board, the computer program comprising logic configured to:

provide a graphical user interface comprising a first portion for providing a graphical display of a printed circuit board model comprising a plurality of image objects associated with a printed circuit board;

receive a user selection of a first image object in the first portion of the graphical user interface;

Art Unit: 2672

display a target area containing the first image object selected, the target area corresponding to a portion of the printed circuit board to be imaged by the <u>automated x-ray imaging inspection</u> system;

receive a user selection of a second image object in the first portion of the graphical user interface; and

modify the displayed target area such that the target area is automatically manipulated to contain the first and second image objects area by centering the target area with respect to the first and second selected image objects.

Claim 25. The computer program of claim 19 20, wherein the target area comprises a square.

Claim 27. A system for manipulating a graphical display of a printed circuit board model, the printed circuit board model adapted to be used in an automated x-ray inspection system for detecting defects in a manufactured printed circuit board having one or more components comprising one or more pins soldered to the printed circuit board, the system comprising:

means for providing a graphical user interface comprising a first portion for providing a graphical display of a printed circuit board model comprising a plurality of image objects associated with a printed circuit board;

means for receiving a user selection of one or more of the image objects in the first portion of the graphical user interface; and

means for displaying a target area such that the target area is automatically manipulated to contain one or more <u>selected image objects</u> and a maximum number of the image objects not selected are contained in the target area; <u>and</u>

Art Unit: 2672

means for modifying the target area by centering the target area with respect to the first and second selected image objects;

wherein the target area corresponds to a portion of the printed circuit board to be imaged by the <u>automated x-ray imaging inspection system.</u>

Claim 28. A system for manipulating a graphical display of a printed circuit board model, the printed circuit board model adapted to be used in an automated x-ray inspection system for detecting defects in a manufactured printed circuit board having one or more components comprising one or more pins soldered to the printed circuit board, the system comprising:

logic configured to:

provide a graphical user interface comprising a first portion for providing a graphical display of a printed circuit board model comprising a plurality of image objects associated with a printed circuit board;

receive a user selection of a first image object in the first portion of the graphical user interface;

display a target area containing the first image object selected, the target area corresponding to a portion of the printed circuit board to be imaged by the <u>automated</u> x-ray <u>imaging inspection</u> system;

receive a user selection of a second image object in the first portion of the graphical user interface; and

modify the displayed target area such that the target area is automatically manipulated to contain the first and second image objects by centering the target area with respect to the first and second selected image objects;

Art Unit: 2672

a processing device configured to implement the logic; and

a display device configured to support the graphical user interface.

Claim 34. The system of claim 28 29, wherein the target area comprises a square.

Claim 41. The system of claim <u>27</u> <u>36</u>, wherein the target area comprises a square.

An examiner's statement of reasons for allowance

The following is an examiner's statement of reasons for allowance:

A user selects first and second image objects within displaying a target area, and automatically centering the first and second image objects of the target area for checking by an automated x-ray inspection system, meaning just the selected image objects is inspected by the x-ray system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2672

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Javid A. Amini whose telephone number is 571-272-7654. The examiner can normally be reached on 8-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Razavi can be reached on 571-272-7664. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
